## About me

---

I'm a front-end developer with a strong foundation in JavaScript and a year of practical experience delivering real projects. I work confidently with React, TypeScript, Vite, Redux Toolkit, and Vue, and I build applications with a focus on architecture, performance, clean structure, and scalability.

I'm comfortable working across the full development process thanks to my experience with Node.js and setting up simple back-end services. I pay attention to code quality — I write tests (TDD/BDD), use Storybook, and design reusable components.

I stay curious, constantly learn, and enjoy discussing ideas with the team to find the most efficient and elegant solutions. I'm open-minded, proactive, and focused on product quality.
